(i) Denotes Indicative Rating

u Denotes Under Review Rating

pca Best's Preliminary Credit Assessment is an independent opinion on the relative general credit strengths and weaknesses of an issuer, obligor, security, or a proposed transaction or financing structure primarily based on business plans, term sheets, and AM Best's expectations relative to the execution of such business plans. AM Best does not define a PCA as a Credit Rating; however, the assessment is expressed using the existing Best's Credit Rating scales.

### 3. The Main Assumptions and Principles used to Construct the Procedures and Methodology used to Determine the Credit Rating as required by Paragraph (a)(1)(ii)(C) of Rule 17g-7

#### Assumptions

Based on historical experience and AM Best's transition studies, ratings typically move no more than one or two notches when Rating Actions occur. However, certain factors could cause larger scale movement in the ratings. AM Best identifies the following primary factors as having the potential to significantly affect ratings:

- Data accuracy and reliability
- Interest rates
- Investment impairments
- Liquidity
- Equity markets
- Catastrophe model risk
- Reinsurance market capacity and credit risk
- Mortality risk
- Morbidity risk
- Holding company/affiliates
- Country risk
- Regulatory risk

#### Elements of Country Risk

AM Best defines country risk as the risk that country-specific factors could adversely affect an insurer's ability to meet its financial obligations. Country risk is evaluated and incorporated into all of AM Best's credit ratings. As part of evaluating country risk, AM Best identifies the various risks within a country that may directly or indirectly affect an insurance company.

AM Best separates these risks into three main categories: economic risk, political risk and financial system risk. Given AM Best's particular focus on the insurance industry, financial system risk is further divided into two sections: insurance risk and non-insurance financial system risk.

Economic risk is the likelihood that fundamental weaknesses in a country's economy will cause adverse developments for an insurer. AM Best's determination of economic risk evaluates the state of the domestic economy, government finances, and international transactions, as well as prospects for growth and stability.

# BEST'S CREDIT RATING DISCLOSURE FORM

AMB #: 000606 - Mid-Continent Casualty Company

Political risk is the likelihood that governmental or bureaucratic inefficiencies, societal tensions, an inadequate legal system or international tensions will cause adverse developments for an insurer. Political risk comprises the stability of a government and society, the effectiveness of international diplomatic relationships, the reliability and integrity of the legal system and business infrastructure, the efficiency of the government bureaucracy, and the appropriateness and effectiveness of the government's economic policies.

Financial system risk (non-insurance) is the risk that financial volatility may erupt due to inadequate reporting standards, weak banking systems or asset markets, or poor regulatory structure. Non-insurance financial system risk considers a country's banking system, accounting standards, financial market development, and government finances, and assesses how vulnerable the financial system is to external or internal volatility. Basel II & III, World Bank Insolvency Principles and international accounting standards are referenced in the analysis, as are the performances of banks, equity indices and fixed-income securities.

Insurance risk is the risk that the insurance industry's levels of development and public awareness, transparency and effectiveness of regulation, reporting standards, and regulatory sophistication will contribute to a volatile financial system and compromise an insurer's ability to pay claims. Insurance risk, which AM Best considers as a distinct subsection of financial system risk, is addressed separately because of the importance of, and AM Best's specific focus on, the industry. The determination is based heavily on the Insurance Core Principles (ICP) of the International Association of Insurance Supervisors (IAIS). AM Best employs a sizable subset of the 28 ICPs by organizing them into three categories: 1) government commitment to an open and well-regulated insurance industry; 2) adequacy of supervisory authority and its supporting infrastructure; and 3) insurer accountability.

## Country Risk Tiers

The assignment of CRTs to score ranges is based on AM Best's assertion that the risk in countries can be categorized loosely to provide a basis of comparison, provided that country-by-country differences are acknowledged. Therefore, CRTs can be classified, in a typical scenario, by the following:

- CRT-1: A country receiving a CRT-1 assignment is characterized by a predictable and transparent political environment, legal system and business infrastructure, a sophisticated financial system regulation with deep capital markets, and a mature insurance industry framework.
- CRT-2: A country receiving a CRT-2 assignment is characterized by a predictable and transparent political environment, legal system and business infrastructure, sufficient financial system regulation, and a mature insurance industry framework.
- CRT-3: A country receiving a CRT-3 assignment is characterized by a developing political environment, legal system, business infrastructure, capital market, and insurance regulatory structure.
- CRT-4: A country receiving a CRT-4 assignment is characterized by a relatively unpredictable and nontransparent political, legal and business environment with an underdeveloped capital market, and a partially to fully inadequate insurance regulatory structure.
- CRT-5: A country receiving a CRT-5 assignment is characterized by an unpredictable and opaque political, legal and business environment with weak rule of law, lower human development and social instability, a limited, illiquid or nonexistent capital market, and a nascent insurance industry.

In short, as country risk increases (as measured by a higher Country Risk Tier), the distribution of ratings generally migrates down the rating scale. This same relationship effectively applies to any significant category of risk an insurer faces, i.e., higher risk exposure places pressures upon financial stability.

## 4. The Potential Limitations of the Credit Rating as required by Paragraph (a)(1)(ii)(D) of Rule 17g-7

Please refer to the [Guide to Best's Credit Ratings](#) for the following:

- [2\(b\)ii. Quality of Information](#)

# BEST'S CREDIT RATING DISCLOSURE FORM

AMB #: 000606 - Mid-Continent Casualty Company

## 10. Information Relating to Conflicts of Interest as required by Paragraph (a)(1)(ii)(J) of Rule 17g-7

1) AM Best Company has been paid to determine the Credit Rating by the obligor being rated or the issue, underwriter, depositor, or sponsor of the security or money market instrument being rated.

| Rating Opinion Characteristics |               |
|--------------------------------|---------------|
| Solicited                      | Participating |

2) AM Best Company was also paid for services by the company other than determining Credit Ratings during the most recently ended fiscal year.

Please refer to the [Guide to Best's Credit Ratings](#) for the following:

- [1\(d\). Not an Investment Advisor or Consultant](#)

## 11. An Explanation or Measure of the Potential Volatility of the Credit Rating as required by Paragraph (a)(1)(ii)(K) of Rule 17g-7

### Factors and Magnitude - Change Rating:

The ratings could be negatively affected by the following:

- Should the group's overall operating performance not return to levels that AM Best considers to be consistent with the adequate designation; Potential rating impact:Minor
- By a trend of increasingly adverse development of prior years' loss reserves; Potential rating impact:Minor
- If American Financial Group, Inc. (AFG), experienced a deterioration in its overall financial strength or credit quality; Potential rating impact:Minor
- An erosion of surplus that causes a significant decline in the group's risk-adjusted capital position to a level short of supporting the current ratings; Potential rating impact:Minor
- If there should be a decrease in AM Best's view of the strategic value of Mid-Continent Group to AFG. Potential rating impact:Minor

NOTE: Only a rating committee can make a rating decision and the above referenced factors would be taken into consideration, along with all available relevant information in determining a Rating Action. However, the magnitude of a potential change in the rating that could reasonably occur as a result of the impact of the factors listed above are characterized by the following summary chart:

| Rating Change Characterization | Number of ICR Notches (Up or Down) |
|--------------------------------|------------------------------------|
| Minor                          | 0 - 1                              |
| Moderate                       | 2 - 3                              |
| Severe                         | > 3                                |

# BEST'S CREDIT RATING DISCLOSURE FORM

AMB #: 000606 - Mid-Continent Casualty Company

## 12. The Information on the Content of the Information of the Credit Rating as required by Paragraph (a)(1)(ii)(L) of Rule 17g-7

### (1) Rating History and Performance

- [Financial Strength / Issuer Credit Rating History](#)

### (2) Expected Probability of Default and Expected Loss

The Commission states that it does not expect NRSROs to alter the meanings of their Credit Ratings or rating procedures and methodologies to conform to this disclosure requirement. Rather, the Commission expects NRSROs to provide "information" to the extent it is consistent with their procedures and methodologies for determining Credit Ratings, on the expected probability of default and expected loss in the event of default. According to the Commission, this information could consist of, for example, historical default and loss statistics, respectively, for the class or subclass of the Credit Rating.

AM Best's Credit Ratings generally are intended to indicate the relative degree of credit risk of an obligor or debt instrument rather than reflect a measure of a specific default probability or loss expectation. AM Best is providing the historical default statistics or derivatives of such default statistics to comply with Rule 17g-7(a)(ii)(L)(2). AM Best does not produce any loss statistics related to any classes of Credit Ratings so it has no information about expected loss given default. Furthermore, expected losses given default is not consistent with AM Best's procedures and methodologies for determining Credit Ratings.

### INSURANCE COMPANY DEFAULT RATES (FSR)

| FSR | 1 - Year | 3 - Year | 10 - Year |
|-----|----------|----------|-----------|
| A++ | 0.00%    | 0.00%    | 0.00%     |
| A+  | 0.04%    | 0.17%    | 0.51%     |
| A   | 0.04%    | 0.27%    | 1.80%     |
| A-  | 0.15%    | 0.73%    | 2.80%     |
| B++ | 0.34%    | 1.45%    | 4.29%     |
| B+  | 0.75%    | 2.16%    | 6.31%     |
| B   | 1.51%    | 4.39%    | 8.81%     |
| B-  | 3.45%    | 6.90%    | 12.07%    |
| C++ | 3.97%    | 6.96%    | 11.20%    |
| C+  | 3.51%    | 7.28%    | 11.64%    |
| C   | 3.37%    | 7.37%    | 15.50%    |
| C-  | 11.94%   | 13.95%   | 17.39%    |
| D   | 17.35%   | 22.16%   | 29.41%    |

Note: Data from 1992 to 2018

**1. Impairments as a Proxy for Defaults.** Upon the public placement of a company, via public court order or other international equivalent, into conservation, rehabilitation and/or insolvent liquidation it is designated by AM Best as a Financially Impaired Company (FIC). Supervisory actions undertaken by Insurance Department regulators without court order are not considered impairments for purposes of compiling Securities and Exchange Commission (SEC) Exhibit 1 statistics unless clear direction is given by the regulator to delay or limit policy or contract payments.

There are a number of regulatory oversight actions that may be taken with respect to troubled insurers in which court orders are not sought, such as required company action plans, various forms and levels of supervision, and licensure actions.

# BEST'S CREDIT RATING DISCLOSURE FORM

AMB #: 000606 - Mid-Continent Casualty Company

Companies may be subject to these insurance department orders and actions on multiple occasions, particularly in certain jurisdictions, and while these regulatory actions suggest concern and impose constraints, they are not necessarily indicative of an insurer's inability to meet its ongoing policy and contract obligations.

Additionally, companies that enter voluntary dissolution and are not under financial duress at that time are not counted as financially impaired.

**2. Construction of Default Rates of Insurance Carriers (FSR).** This table was constructed by directly observing the default rates of insurance operating companies rated on the traditional Financial Strength Rating (FSR) scale.

**3. Rating a Measure of Relative Credit Risk.** AM Best's Credit Ratings generally are intended to indicate the relative degree of credit risk of an obligor or debt instrument rather than reflect a measure of specific default probability.

**4. Data Consistent With Submission to the Securities and Exchange Commission.** The data used to calculate default rates in this table is consistent with the data used to calculate the 1-year, 3-year and 10-year default rates for insurers as required by the SEC in Exhibit 1 of Form NRSRO. Unlike the single cohort method of analysis used in the submission to the Commission, however, the calculations in this table reflect the use of the average cohort approach in order to capture the effect of the various economic cycles experienced by insurance carriers since 1992 when the current 13-point FSR scale (A++ to D) was adopted by AM Best.

**5. Data Does Not Necessarily Reflect Default Expectations.** The data in this table does not necessarily reflect our default rate expectations. For example, the fact that we show no default rate for the 1-year "A++" category does not mean that we expect no defaults for this rating. It only means that we have not yet observed any historical defaults over a 1-year period for companies rated "A++".

**6. Data Changes Periodically.** AM Best may periodically change the data in the table if warranted. The reasons for the revisions may be as follows: If AM Best 1) adds more rating cohorts which significantly changes the calculated default rates, 2) changes its criteria for recognizing insurance company defaults, or 3) incorporates new defaults or adjusts existing default data.

## INSURANCE COMPANY DEFAULT RATES (ICR)

| ICRs | 1 - Year | 3 - Year | 10 - Year |

| ccc- | 11.94%   | 13.95%   | 17.39%    |
| cc   | 11.94%   | 13.95%   | 17.39%    |
| c    | 17.35%   | 22.16%   | 29.41%    |

Note: Default rates based on FSR to ICR Translation.

See Best's Credit Rating Methodology, *ICR/FSR Rating Translation Table* (Exhibit D.1)

**1. Impairments as a Proxy for Defaults.** Upon the public placement of a company, via public court order or other international equivalent, into conservation, rehabilitation and/or insolvent liquidation it is designated by AM Best as a Financially Impaired Company (FIC). Supervisory actions undertaken by Insurance Department regulators without court order are not considered impairments for purposes of compiling Securities and Exchange Commission (SEC) Exhibit 1 statistics unless clear direction is given by the regulator to delay or limit policy or contract payments.

There are a number of regulatory oversight actions that may be taken with respect to troubled insurers in which court orders are not sought, such as required company action plans, various forms and levels of supervision, and licensure actions. Companies may be subject to these insurance department orders and actions on multiple occasions, particularly in certain jurisdictions, and while these regulatory actions suggest concern and impose constraints, they are not necessarily indicative of an insurer's inability to meet its ongoing policy and contract obligations.

Additionally, companies that enter voluntary dissolution and are not under financial duress at that time are not counted as financially impaired.

**2. Construction of Default Rates of Insurance Carriers(ICR).** This table was not constructed by directly observing the default rates of insurance operating companies rated on the 21-point Issuer Credit Rating (ICR) scale because default data associated with ICRs is sparse. It was constructed by converting each operating company Financial Strength Rating (FSR) to an equivalent ICR based on AM Best's FSR/ICR translation table.

**3. Rating a Measure of Relative Credit Risk.** AM Best's Credit Ratings generally are intended to indicate the relative degree of credit risk of an obligor or debt instrument rather than reflect a measure of specific default probability.

**4. Data Does Not Necessarily Reflect Default Expectations.** The data in this table does not necessarily reflect our default rate expectations. For example, the fact that we show no default rate for the 1-year "aaa" category does not mean that we expect no defaults for this rating. It only means that we have not yet observed any historical defaults over a 1-year period for companies with an equivalent "aaa" rating.

**5. Data Changes Periodically.** AM Best may periodically change the data in the table if warranted. The reasons for the revisions may be as follows: If AM Best 1) adds more rating cohorts which significantly changes the calculated default rates, 2) changes its criteria for recognizing insurance company defaults, or 3) incorporates new defaults or adjusts existing default data.

Note: Default rates based on notching applied to insurance ICRs.

See Best's Credit Rating Methodology, *Typical Notching Difference Between Operating Company ICR and Holding Company ICR* (Part IV, Exhibit B.1)

**1. Impairments as a Proxy for Defaults.** Upon the public placement of a company, via public court order or other international equivalent, into conservation, rehabilitation and/or insolvent liquidation it is designated by AM Best as a Financially Impaired Company (FIC). Supervisory actions undertaken by Insurance Department regulators without court order are not considered impairments for purposes of compiling Securities and Exchange Commission (SEC) Exhibit 1 statistics unless clear direction is given by the regulator to delay or limit policy or contract payments.

There are a number of regulatory oversight actions that may be taken with respect to troubled insurers in which court orders are not sought, such as required company action plans, various forms and levels of supervision, and licensure actions. Companies may be subject to these insurance department orders and actions on multiple occasions, particularly in certain jurisdictions, and while these regulatory actions suggest concern and impose constraints, they are not necessarily indicative of an insurer's inability to meet its ongoing policy and contract obligations.

Additionally, companies that enter voluntary dissolution and are not under financial duress at that time are not counted as financially impaired.

**2. Construction of Default Rates of Corporates.** This table was not constructed by directly observing the default rates of corporate ratings on the 21-point Issuer Credit Rating (ICR) scale because default data associated with corporate ICRs is sparse. Rather, this table was constructed by a) converting each default rate associated with each Financial Strength Rating (FSR) to its equivalent operating company ICR based on AM Best's FSR/ICR translation table, and then, b) converting the operating company ICR to an equivalent corporate rating based on a notching algorithm set forth in the criteria, Insurance Holding Company and Debt Ratings, to reflect the legal separation of insurance holding companies from operating insurers as well as the normal subordination of insurance holding company creditors to operating company policyholders.

**3. Ratings a Measure of Relative Credit Risk.** AM Best's Credit Ratings generally are intended to indicate the relative degree of credit risk of an obligor or debt instrument rather than reflect a measure of specific default probability.

# BEST'S CREDIT RATING DISCLOSURE FORM

AMB #: 000606 - Mid-Continent Casualty Company

**4. Data Does Not Necessarily Reflect Default Expectations.** The data in this table does not necessarily reflect our default rate expectations. For example, the fact that we show no default rate for the 1-year "aaa" category does not mean that we expect no defaults for this rating. It only means that we have not yet observed any historical defaults over a 1-year period for corporate obligations with an equivalent "aaa" rating.

**5. Data Changes Periodically.** AM Best may periodically change the data in the table if warranted. The reasons for the revisions may be as follows: If AM Best 1) adds more rating cohorts which significantly changes the calculated default rates, 2) changes its criteria for recognizing insurance company defaults, or 3) incorporates new defaults or adjusts existing default data.

## ASSET-BACKED SECURITIES DEFAULT RATES (All Subclasses)

| ICRs | 1 - Year | 3 - Year | 10 - Year |
|------|----------|----------|-----------|
| aaa  | 0.03%    | 0.11%    | 0.42%     |
| aa+  | 0.08%    | 0.14%    | 0.58%     |
| aa   | 0.11%    | 0.17%    | 0.69%     |
| aa-  | 0.14%    | 0.28%    | 0.88%     |
| a+   | 0.16%    | 0.33%    | 1.09%     |
| a    | 0.20%    | 0.41%    | 1.31%     |
| a-   | 0.22%    | 0.62%    | 2.24%     |
| bbb+ | 0.28%    | 0.96%    | 3.45%     |
| bbb  | 0.35%    | 1.26%    | 4.50%     |
| bbb- | 0.45%    | 1.56%    | 5.48%     |
| bb+  | 0.84%    | 2.90%    | 10.00%    |
| bb   | 1.23%    | 4.68%    | 15.65%    |
| bb-  | 1.56%    | 6.02%    | 19.50%    |
| b+   | 3.28%    | 9.73%    | 31.11%    |
| b    | 3.73%    | 10.80%   | 33.58%    |
| b-   | 4.77%    | 13.08%   | 38.23%    |
| ccc+ | 6.74%    | 17.66%   | 47.84%    |
| ccc  | 10.33%   | 20.41%   | 49.46%    |
| ccc- | 13.85%   | 23.11%   | 51.07%    |
| cc   | 19.53%   | 28.87%   | 57.44%    |
| c    | 23.30%   | 31.74%   | 59.04%    |

*Best's Idealized Issue Default Matrix* (Exhibit E.2)

**1. Asset-Backed Securities Default.** AM Best designates an asset-backed security as being in default if the issuer of the security failed to timely pay principal or interest due according to the terms of the security.

**2. Construction of Default Rates of Asset-Backed Securities.** This table was not constructed by directly observing the default rates of asset-backed securities. The default rates of the ratings in this category are equivalent to the default rates in Best's Idealized Issue Default Matrix. This matrix reflects AM Best's long-term view of defaults of asset-backed securities and structured finance transactions. This view was formed by considering the defaults associated with operating

AMB #: 000606 - Mid-Continent Casualty Company

insurance companies rated by AM Best, the notching process employed to derive the ratings associated with holding company debt obligations, and the need to make distinctions between rating categories.

**3. Ratings a Measure of Relative Credit Risk.** AM Best's Credit Ratings generally are intended to indicate the relative degree of credit risk of and obligor or debt instrument rather than reflect a measure of specific default probability.

**4. Data Changes Periodically.** The data in the table will change if AM Best modifies Best's Idealized Issue Default Matrix. This matrix is published in Best's Insurance-Linked Securities & Structures Methodology and may be revised based on more recent insurance company default data.

*For ratings issued in or endorsed into the European Union, historic default rates published by ESMA are available at: <https://cerep.esma.europa.eu/cerep-web/statistics/defaults.xhtml>*

## 13. Information on the Sensitivity of the Credit Rating to Assumptions as required by Paragraph (a)(1)(ii)(M) of Rule 17g-7

| Topic                         | (1) Key Assumption Detail   | (2) Potential Impact on the Rating  |
|-------------------------------|---|---|
| Data Accuracy and Reliability | While public information is considered as part of the rating process, AMB relies primarily on audited financial statements, third party actuarial reports, documents and assertions provided by management. The assumption is that the financial information provided is reliable and credible, although AMB does not undertake to verify the accuracy of this information.   | A material misstatement of financial performance or capital position, whether through negligence or fraud, could negatively affect a company's rating. For example, inflated asset valuations or a faulty actuarial opinion of reserve adequacy could result in an incorrect assessment of the financial strength of a company.   |
| Investment Impairments        | Investment impairments at or below the historical average.  | Significant downgrades in credit quality of fixed income portfolios, realized losses through impairments of invested assets increases required capital and reduces net income and capital/surplus. Rating Action may occur.   |
| Catastrophe Model Risk        | Key assumption used in determining this rating takes into consideration information provided by third party catastrophe modelers. Best does not validate these models but assumes a degree of confidence in these models which Best uses as a benchmark to measure a company's exposure to modeled catastrophe risk. Best also uses this modeled output as a discussion point around enterprise risk management and risk mitigation. While this output can have a high degree of variability, Best believes these models are very useful tools which provides its users with the expertise, research and technical knowledge otherwise unavailable to them. Company specific data quality, data resolution and historical model reliability are also elements which lend itself to confidence in the modeled loss provided. | Catastrophe models are risk management tools that can vary widely due to the actual event (versus model event set) and model sensitivities including geocoding / data resolution, data quality (construction / ITV), reliability (missing information) and coverage. Therefore, if assumptions used in the model prove to be significantly different from actual performance, a company's capital position can be potentially exposed to a material negative impact due to a lack of reinsurance protection. Rating pressure may occur as a result. |
| Holding Company / Affiliates  | Assumes no sudden change in holding company leverage, coverage and/or liquidity. Additional assumptions include no change in credit facilities to obtain letters of credit from a commercial bank, through the placement of assets in trust. If rating includes a level of rating enhancement based on a degree of implicit and explicit support provided by the parent company   | Any sudden change in holding company leverage, coverage, and or liquidity could result in a rating change for both the holding company and its operating insurance subsidiaries. Any alteration in a parent (holding) company's ability to provide implicit and/or explicit parental support could alter Best's view of rating enhancement which could suddenly cause a   |

| Topic | (1) Key Assumption Detail  | (2) Potential Impact on the Rating  |
|-------|--|---|
|       | and/or affiliate, the assumption is that the level of support will remain prospectively. | rating downgrade. In addition, changes in enhancement provided to group-rated members, may have an impact on the rating(s). Best evaluates impact on capital via forecasted BCAR including planned dividends to Parent and by evaluating BCAR for the entire Enterprise based on tangible equity. The starting point for every rating is the stand-alone evaluation of the legal entity's balance sheet strength, operating performance and business profile. |

## 14. Information on the Representations, Warranties, and Enforcement Mechanisms as required by Paragraph (a)(1)(ii)(N) of Rule 17g-7

The representations, warranties, and enforcement mechanisms available to investors which were disclosed in the prospectus, private placement memorandum, or other offering documents for the asset-backed security and that relate to an asset pool underlying the asset-backed security. This disclosure only applies to Rating Actions associated with asset-backed securities as defined by section 3(a)(79) of the Securities Exchange Act of 1934, as amended. Furthermore, the disclosure applies to asset-backed securities that were initially rated on or after September 26, 2011.

### 15. Attestation as required by Paragraph (a)(1)(iii) of Rule 17g-7

#### **Attestation**

Attached is a signed statement by a person within AM Best that has responsibility for the Rating Action and, to the best knowledge of the person: (A) No part of the Credit Rating was influenced by any other business activities; (B) The Credit Rating was based solely upon the merits of the obligor, security, or money market instrument being rated; and (C) The Credit Rating was an independent evaluation of the credit risk of the obligor, security, or money market instrument.

As the person responsible for this Rating Action, which was determined through the rating committee process, to the best of my knowledge:

- No part of the rating was influenced by any other business activities;
- The Credit Rating was based solely upon the merits of the obligor or security being rated and
- The Credit Rating was an independent evaluation of the risks and merits of the obligor or security being rated.

Note: Best's Credit Ratings are a product/service of AM Best Rating Services, Inc. and not of any particular individual group or committee within AM Best.

AMB #: 000606 - Mid-Continent Casualty Company

## 16. Additional Regulatory Disclosures

### Key Elements Underlying the Rating

The Rating Rationale is based on the consolidated financials of the Rating Unit 004072 Mid-Continent Group of which 000606 Mid-Continent Casualty Co is a member.

### Rating Rationale

#### Balance Sheet Strength: Very Strong

- Mid-Continent has had a consistently very strong risk-adjusted capital position that is supportive of the ratings.
- Surplus growth has been variable, reflecting the dividend and capital management strategies of the ultimate parent, which emphasize maintaining sufficient capital in the operation relative to its risk with centralized management of enterprise capital. The group's consistent generation of organic surplus growth, maintenance of solid risk-adjusted capitalization measures, demonstrated flexibility in paying dividends, and the strong support from the parent with contributions when needed offset some of the concern regarding overall surplus growth
- Continued reserve development losses remain a concern, driven primarily by claims associated with product liability business written in the state of Florida, which the group no longer offers.
- The investment portfolio is fairly conservative, with the majority of assets invested in highly rated fixed-income investments.

#### Operating Performance: Adequate

- The group has reported positive pre-tax operating income over the past 10 consecutive years.
- Top-line growth has been muted due to the niche nature of the business profile, the impact of recent macroeconomic conditions on its targeted business classes and expansionary efforts that have underperformed expectations.
- Mid-Continent's generally solid underwriting performance reflects low loss and LAE ratios that have continued to modestly outperform the peer composite in the most recent years. The group's underwriting expense ratio remains elevated relative to its peers, producing overall underwriting and operating results that have slightly underperformed the composite, on average, over the past five years.
- The group's recent underwriting performance has also been pressured by adverse loss reserve development, which is largely related to product liability business written in the state of Florida, while operating results are impacted by the low-risk characteristics of the group's investments.

#### Business Profile: Neutral

- The group has demonstrated expertise in selected niche markets with profitable operating performance and long-standing agency relationships.
- The group is of modest size and its business is concentrated geographically with two states making up roughly 50% of premiums.
- Historically, the group specialized in serving the oil and gas industry; however, in response to ongoing consolidation within the oil and gas sector, management shifted its focus to include program business for residential homebuilders, utility districts, and underground storage tanks. Nonetheless, both energy and construction segments may be in decline in the near term.
- The group offers an array of products including general and product liability, commercial and personal auto, surety, umbrella and inland marine; however, the majority of premium production is general liability.

#### Enterprise Risk Management: Appropriate

- The group is part of a comprehensive ERM program with its parent that is viewed as appropriate given the size and complexity of the organization.
- At the group level, management employs traditional risk techniques regarding operational risks (e.g., underwriting, investment, and credit) that include catastrophe analysis.
- Exposures identified by management are rolled up into the broad AFG risk management program, which is overseen by the Audit Committee within the AFG Board of Directors.

#### Lift Drag

# BEST'S CREDIT RATING DISCLOSURE FORM

AMB #: 000606 - Mid-Continent Casualty Company

- The ratings of the members of Mid-Continent Group reflect ratings lift from the lead rating unit, Great American Insurance Companies, recognizing the historical support provided by ultimate parent AFG to the Mid-Continent Group, as well as other implicit and explicit support the group receives from being part of the AFG enterprise.

## Outlook Rationale

The stable outlooks reflect AM Best's expectation that Mid-Continent will continue to demonstrate adequate operating results while maintaining the very strong level of risk-adjusted capitalization over the intermediate term. The outlooks further anticipate that ultimate parent AFG will continue to support the group as needed over that period, through both implicit and explicit means, as required.
